# S-Band Redundant LNA Systems LRS-1000 Series

Typical S-Band 1:1 LNA Plate Assembly

# **Plate Assembly Features**

- LS-2000 Series S-band Low Noise Amplifiers (LNAs)
- High quality dual coaxial switches
- Manual override
- Output coaxial isolators standard
- Input coupler, output coupler, and offline I/O options available

# **Redundancy Controller Features**

- 10/100 Base T Ethernet network interface
- Supports SNMP v1, v2c, and v3
- Rack-mount chassis, 19" wide, 1¾" (1 RU) high
- Dual, redundant power supplies
- Manual or automatic operation
- Monitors unit currents, external alarms, or both
- Automatically switches RF path to standby unit when unit failure occurs
- User-selectable RS-232/-422/-485 serial I/O M&C interface
- Parallel I/O M&C interface
- Menu-driven user configuration of all options
- Front panel graphically depicts switch positions and unit status
- Worldwide universal AC input capability standard; consult factory for DC prime power
- Audible alarm
- CE certified and RoHS compliant; EAR 99

## Introduction

Redundant LNA systems minimize system downtime due to LNA failure by providing a spare LNA and an automatic means of switching to the spare upon failure of a primary LNA. A 1:1 system provides one spare LNA for one primary LNA. A 1:2 system provides a spare LNA for either of two primary LNAs. The systems consist of an outdoor plate assembly which mounts at the antenna hub, an indoor control panel and interconnecting control cable.

# **System Block Diagrams**

# System Specifications \*

Parameter	Notes	Min.	Nom./Typ. †	Max.	Units
Frequency Range	Band "C"	2200		2400	MHz
Noise Temperature, System	At +23 °C, standard With system option C Versus temperature		See Table 1	TLNA + 10 TLNA + 25	K K
Gain		57	60		dB
Gain Match	Between LNAs			2	dB
Gain Flatness	Full band Per 10 MHz			±0.75 ±0.30	dB dB
Gain Stability	Per day, constant temp Versus temperature		-0.04	±0.2	dB dB/℃
VSWR	Input, standard Input, with system option C Output		1.25 1.30 1.20	1.30 1.40 1.25	:1 :1 :1
Power Output at 1 dB compression (P <sub>1 dB</sub> )	Standard With system option D	+8 +7	+10 +9		dBm dBm
Third Order Intercept Output, OIP <sub>3</sub>	Standard With system option D	+18 +17	+20 _19		dBm dBm
AM/PM Conversion	At -5 dBm out			0.05	%dB
Group Delay per 36 MHz	Linear Parabolic Ripple			0.05 0.005 1.0	ns/MHz ns/MHz <sup>2</sup> ns p-p
Maximum Input Power	Without damage Desens. threshold 1.625–1.661 GHz			+10 -50 <sup>A</sup>	dBm dBm
Connectors	RF Input, standard RF Input, with system option C RF Output Offline In/Out (system option E) Coupler Out (system option D)		SMA Female Type N Female Type N Female Type N Female Type N Female		
Temperature Range	Switch Plate Assy	-40		+60	∞

<sup>\*</sup> System specifications depend on choice of LNA and various options. Specifications shown are for a typical system using LS-2000 series LNAs (Specification 29811).

<sup>&</sup>lt;sup>†</sup> When there is only one value on a line, the Nom./Typ. column is a nominal value; otherwise it is a typical value. Typical values are intended to illustrate typical performance, but are not guaranteed.

## Part Number/Ordering Information

S-Band LNA Systems <sup>(a)</sup> LRSXXX		
System Type:	1:11	
LNA Frequency:	2200-2400 MHz . C	
LNA Noise Temp.	: 45 K	
System Options:	No input coupler(s) X Input couplers, -30 dB C	
	No output coupler(s) X Output coupler(s), -20 dB D	
	No ofline I/O X Offline I/O, terminated, with isolator . E	
Control Cable: (Standard service)	No cable X 100 ft. (30 m)	

#### Examples:

1:1 system with 2200-2400 MHz, 45 K LNAs, no LNA options, no system options, and 100 ft. cable:

Order Number LRS1C45-XXXXXX1

1:1 system with 2200-2400 MHz, 50 K LNAs, no LNA options, input coupler, and 200 ft. cable:

Order Number LRS1C50-XXXXCXX3

1:2 system with 2200-2400 MHz, 45 K LNAs, input couplers, output couplers, offline I/O, and 150 ft. cable:

Order Number LRS2C45-XXXXCDE2

1:2 system with 2200-2400 MHz, 50 K LNAs, output couplers, offline I/O, and 250 ft. cable:

Order Number LRS2C50-XXXXDE4

#### Notes:

(a) Consult factory for custom configurations.

## Table 1 — Noise Temperature vs. Ambient Temperature

Noise temperature vs. ambient temperature can be found from the equation,

$$NT_2/NT_1 = (T_2/T_1)^n$$

#### where:

 $NT_2$  = Noise Temperature at  $T_2$   $NT_1$  = Noise Temperature at  $T_1$  $T_2$  = Temperature 2 in K

 $T_1$  = Temperature 1 in K

n = 1.5 for the LNAs or = 1.0 for passive losses

For the case where  $T_1 = 296 \text{ K} (+23 ^{\circ}\text{C})$ , the ratio NT<sub>2</sub> /NT<sub>1</sub> is shown in the table below for both LNAs (n = 1.8) and for passive losses (n = 1.0):

Ambient Temperature T <sub>2</sub> (°C)	n = 1.5 NT <sub>2</sub> /NT <sub>1</sub>	n = 1.0 NT <sub>2</sub> /NT <sub>1</sub>
0	0.86	0.92
+23	1.00	1.00
+40	1.09	1.06
+50	1.14	1.09
+60	1.17	1.13

Example: For a 1:1 system with input coupler and 50 K LNAs,  $T_{LNA} = 50$  K at +23  $^{\circ}$ C and passive

losses = 25 K at +23 °C; thus,  $T_{SYS}$  = 75 K at +23 °C. What is  $T_{SYS}$  at +50 °C?

From the table,  $NT_2/NT_1$  at 50 °C = 1.14 for the LNAs and 1.09 for the passive losses:

 $NT_2 = 1.14 \times (50 \text{ K}) + 1.09 \times (25 \text{ K}) = 57 \text{ K} + 27.3 \text{ K} = 84.3 \text{ K} \text{ at } +50 \text{ }^{\circ}\text{C}.$ 

### **Redundant System Controller**

1:2 Redundant System Controller, Model RSC12V1-AC

The RSC series redundant system controllers for 1:1 and 1:2 systems directly power the LNAs and monitor the output voltages and currents to detect faults. The RSC

can also monitor external alarm signals or a combination of output currents and external alarm inputs. Upon detecting a fault, the RSC drives an RF transfer switch to activate the spare unit.

The RSC offers monitoring and control of auxiliary RF hardware; remote monitor and control via network, serial interface, or parallel I/O; flexible configuration of system behavior; remote disable of local controls for security; and the ability to detect and report certain failures within the controller itself.

A second RSC can be linked to a primary RSC to provide full system control from an alternate control site. When set up this way, the secondary RSC is referred to as a remote control panel, or RCP. The configuration and settings of the primary RSC are transferred to the RCP, which then mimics its controls and interfaces. This permits system operation from a location that is up to 4000 ft (1200 m) distant from the primary controller.

## **Controller Specifications**

Unit Status Monitor Methods	Controller monitors unit bias current; alarm is generated if current goes outside of allowed tolerance window (LNA or LNB systems). Controller also monitors external alarm inputs (SSPA and other systems) or combinations of both internal unit current and external alarm inputs.	
Unit Current Window Width	±5% to ±25% of nominal; user selectable in 5% steps (applies to all monitored unit currents)	
Switchover Time	100 ms maximum	
Unit Power Outputs	+14.3 to +15.0 Vdc, 700 mA maximum	
Switch Drive Outputs	-22 to -28 Vdc, 2 A maximum	
External Alarm Inputs	Optionally up to one per unit; require sinking 5 mA at 5 Vdc to negate alarm	
Serial I/O Interface	RS-232/RS-422/RS-485 2- or 4-wire; user selection	
Parallel I/O Interface	Control inputs: Contact closures to ground; require sinking 20 mA at 15 Vdc Status outputs: Form 'C' dry contacts; 100 Vdc, 0.5 A, 3 W max (resistive load)	
Controller Dimensions	19" (483 mm) W x 1.72" (43.7 mm) H x 17.5" (445 mm) D; 7.6 lb (3.4 kg)	
Chassis Slides	Standard. Radio relay rack-mount brackets available on request.	
Cable Length to Plate Assy	Order cable separately. 100 ft (30 m) to 250 ft (75 m) lengths in 50 ft (15 m) increments are standard; other lengths (up to 500 ft or 150 m) are available by special order.	
AC Input (standard)	90-264 Vac, 47–63 Hz, 100 W; Dual AC inputs and dual redundant power supplies.	
DC Input (option)	Requires DC-AC inverter. Consult factory.	
Temperature Range	Operating: 0 to +50 °C (indoor equipment environment) Storage: -40 to +70 °C	
Relative Humidity	Operating: 5% to 95% non-condensing	
Altitude	Up to 10,000 ft (3000 m) above mean sea level	
Reliability	MTBF: 48,200 hours; MTTR: less than 30 minutes with spares and proper technical person.	

## **Controller Front Panel Controls and Indicators**

Unit Status Alarms	LED Indicators glow green when OK, red when a fault is detected.
PS Indicator	Glows red to show fault with either dual redundant power supply.
Panel Test	Pushbutton lights all indicators & tests audible alarm.
RF Switch Pushbuttons and Indicators	Pushbuttons are used to manually switch units. Front panel indicators show which units are on-line. Unit indicators light red to show faulted units.
	In a typical 1:1 system, Unit 1 is the primary unit and Unit 2 is on standby. In a 1:2 system, Unit 1 is the primary unit for Pol 1 and Unit 2 is the primary unit for Pol 2. Unit 3 is on standby and can be selected for either Pol. In a dual 1:1 system, Unit 1 is the primary unit and Unit 2 is on standby for Pol 1; Unit 3 is the primary and Unit 4 is on standby for Pol 2.
Auto/Manual Switch and Indicators	In Auto mode, a unit failure initiates automatic switchover to the standby unit. In manual mode, the on-line unit can be selected from the front panel or by serial I/O, parallel I/O or network command.
Remote/Local Switch and Indicators	Selects local (front panel) control, or remote control from serial I/O, parallel I/O, or network.  An optional second RSC, configured as a Remote Control Panel, provides the means to operate the system from a physically distant, alternate location.

## **Controller Rear Panel Interfaces**

J1, J2 – LINE 1, LINE 2 (IEC 320-C14)	Dual power entry modules contain the AC line input connectors. System can be powered from separate AC lines if desired. Either or both power supplies are capable of operating the system.	
J3 – PLATE ASSY (37-pos D, Female)	Cable to plate assembly carries unit power (for line drivers, LNAs or LNBs) and switch drive signals. <b>Order cable separately.</b> Standard lengths are 100' (30 m) to 250' (75 m) in 50' (15 m) increments; other lengths are special order. An adapter cable mates the controller to legacy system cables.	
J6 – SERIAL I/O and J7 – SERIAL LOOP (9-pos D Female)	RS-232/RS-422/RS-485 connector for user M&C System. Commands provide monitoring, controlling, and configuration. Interconnect cable lengths to 4000 ft (1200 m) with RS-422 or RS-485. A serial loop connector provides a convenient connection for daisy-chained systems.	
J5 – REMOTE LINK (9-pos D Male)	For connection via a proprietary RS-422 link (up to 4000 ft/1200 m) to an optional, second RSC, which duplicates Local control functions at a secondary site.	
J9 – NETWORK (RJ-45)	10/100 Base T Ethernet connection port via standard RJ-45 connector. Supports SNMP v1, v2c and v3.	
J4 – EXT ALARM (9-pos D Female)	External Alarm inputs. Substitute for or combine with internal unit current monitor alarms. Allows an external signal to indicate unit failure. Unused inputs can be used as status inputs to M&C system.	
J8 – PARALLEL I/O (37-pos D Male)	Parallel I/O (discrete logic) connection for limited control and monitoring of the system.  Form 'C' relay contact outputs (1:2 system example):  • Unit 1 status  • PS 1 status  • Pol 1: Unit 1 or Unit 3  • Unit 2 status  • Pol 2: Unit 2 or Unit 3  • Unit 3 status  • Local/Remote mode  • Auto/Manual mode  Control inputs—contact closure to ground (1:2 system example):  • Pol 1 Unit 1 select  • Pol 2 Unit 2 select  • Auto/Manual select  • Pol 1 Unit 3 select  • Pol 2 Unit 3 select
